1. ***Make Person (method introduce()) and Student (method study()). Call both on one Student object.***

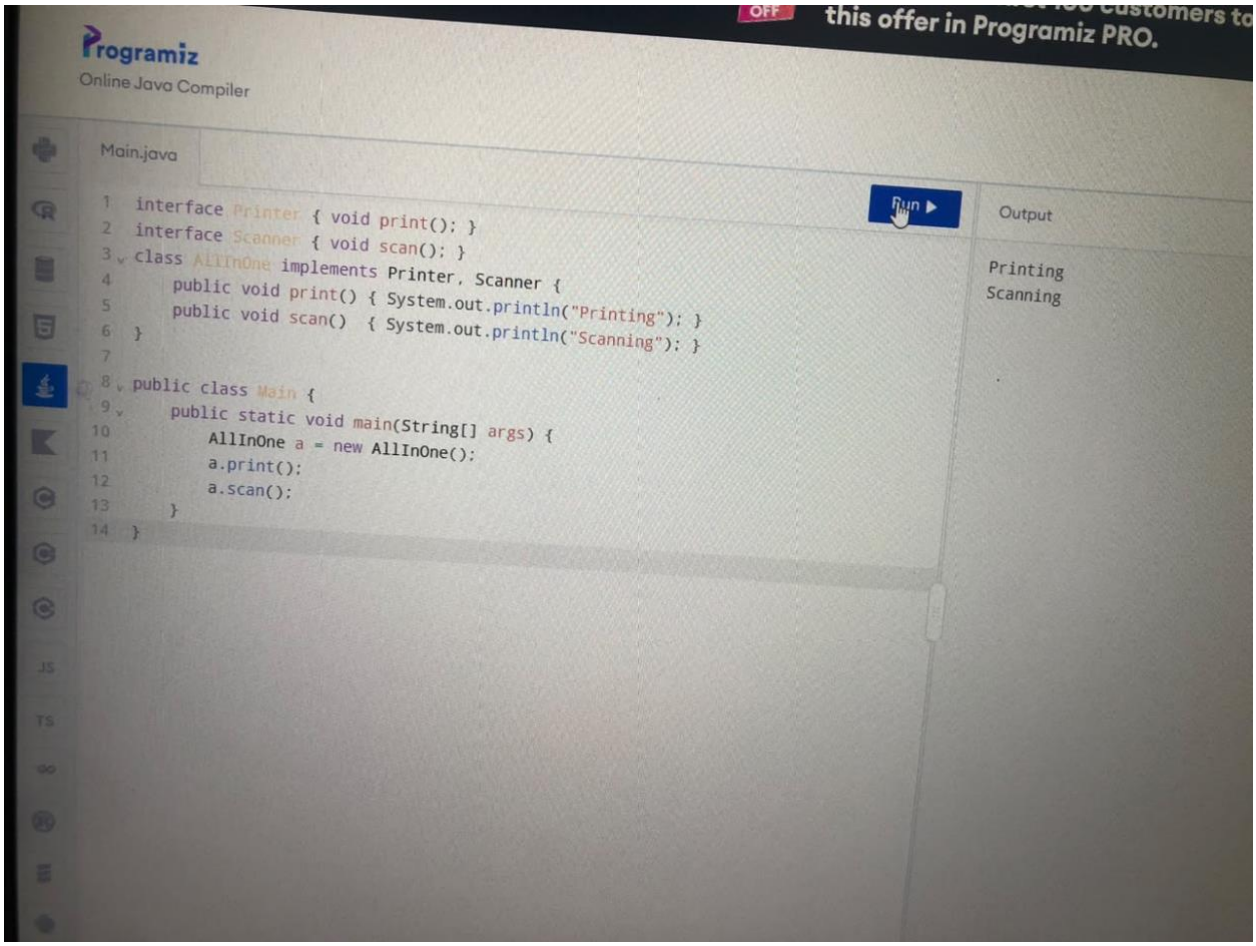

2. ***build Grandfather → Father → Son, each with one method that prints its own name. Call all three on one Son object.***

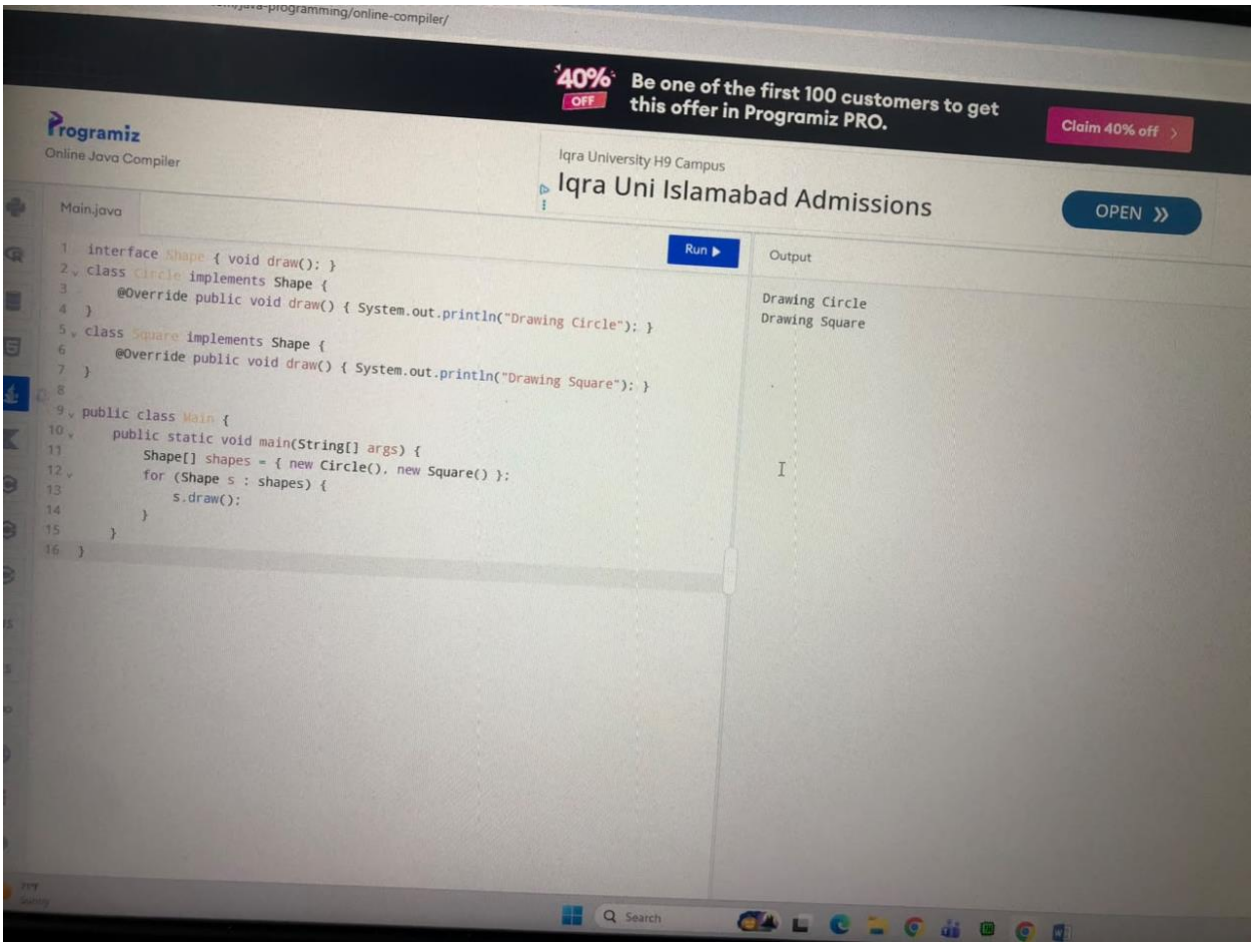

3. ***make Employee (with showName()), then Manager and Engineer, each with its own showRole().***

4. ***make interfaces Printer (print()) and Scanner (scan()), then a class AllInOne that implements both.***

5. ***create an interface Shape with void draw();. Make Circle and Square implement it with @Override. Store both in a Shape[] array and call draw() in a loop.***

6. ***make Employee with a constructor taking name. Make Manager call super(name) and also print a bonus line.***
